This app estimates heart disease risk from clinical inputs using a machine learning model trained on the Heart Failure Prediction dataset. It is **not** a medical diagnosis.

♥ Heart Disease Prediction System

Enter a patient's clinical details and get an instant, data-driven estimate of heart disease risk — built on logistic regression trained over 900+ real patient records.

📄 Step 1

Enter the patient's personal and medical details on the next page.

🧠 Step 2

Our trained model analyzes the inputs against known risk patterns.

📊 Step 3

View a clear risk result with a visual meter and recommendations.

This app estimates heart disease risk from clinical inputs using a machine learning model trained on the Heart Failure Prediction dataset. It is **not** a medical diagnosis.

Prediction Result

RISK STATUS: HIGH

High Chance of Heart Disease

The model estimates a 60.0% likelihood of heart disease based on the entered details.

- Please consult a cardiologist for a thorough evaluation.
- Maintain a heart-healthy, low-sodium, low-fat diet.
- Avoid smoking and limit alcohol intake.
- Schedule regular checkups and monitor blood pressure and cholesterol.

📊 Prediction Result

RISK STATUS: LOW

✅ Low Chance of Heart Disease

The model estimates a **13.0%** likelihood of heart disease based on the entered details.

- Keep up a healthy, balanced diet.
- Exercise regularly — aim for at least 150 minutes a week.
- Continue routine health checkups.
- Manage stress and get adequate sleep.
